### **DETAILED ACTION**

It appears that the word “system” was erroneously omitted after “power regulator” in line 1 of claim 1. Otherwise the claim 1 would recite a power regulator comprising itself. For examination purposes examiner assumes that claim 1 is intended to recite a “power regulator system.”

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12 and 46-51, drawn to a microelectronic power regulator for regulating power to a microprocessor, classified in class 713, subclass 300.
- II. Claims 13-45 and 52-54, drawn to a power regulator for responding to transient power demands, classified in class 323, subclass 274.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a microelectronic power regulator does not require specific positive and negative transient response portions to regulate power to a microprocessor. The subcombination has separate utility such as responding to positive and negative transient power demands of a device other than a microprocessor, such as a mechanical device.

A telephone call was made to Ted Galanthay on 3/7/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
